EffiMat®
Reduce costs with automated high-speed order picking
EffiMat® provides the ground breaking Intelligent Box Mover Technology, which has set new standards for picking speed, picking accuracy and flexible integration. The order picking system enables needs-based presentation of boxes, reducing picking cycles to an absolute minimum.

**A NEW LEVEL OF EFFICIENCY**

The Intelligent Box Mover Technology allows EffiMat® to operate both vertically and horizontally, so the order picking system is able to present up to five different standard boxes containing different product numbers in each working cycle - regardless of their position in the tower.

The result: EffiMat® is at least three times more efficient than any traditional Vertical Lift Module (VLM).

And you will notice this on your bottom line. EffiMat® is the ideal solution for every company dealing with many parts and order structure that involves volumes. All peripherals can be tailored to individual customer requirements.

**EFFIMAT® FAST AND INTELLIGENT ORDER PICKING SYSTEM**

Are you in need of efficient, flexible and fast picking?
EFFIMAT®
YOUR SOLUTION FOR
FLEXIBLE AND EFFICIENT
PARTS MANAGEMENT

At any point of the value chain

EffiMat® is able to present up to 200 boxes containing different products in an hour. This exceptional order picking speed makes it at least three times more efficient than traditional Vertical Lift Modules (VLMs).

FLEXIBLE INTEGRATION IN AUTOMATIC PRODUCTION ENVIRONMENT
EffiMat® is flexible and can be used as a stand-alone solution, or integrated as a standard element for individually designed solutions. The integration of storage automation and robot technology allows for flexible solutions in smart production environments.

USER-FRIENDLY AND ERGONOMIC DESIGN
A control panel at eye level, a good working height and an optimized reach depth for order picking allows EffiMat® to provide optimal working conditions.

SAVING LIMITED AND EXPENSIVE FLOOR SPACE
Modern production sites as well as warehouses require a highly efficient use of the available space. Thanks to its compact storage, EffiMat® reduces the footprint by up to 75% compared to manual shelving.

WHY CHOOSE EFFIMAT®?
• Presents 200 boxes an hour
• Triples picking rate and minimize picking errors
• Reduces footprint by up to 75%
• The boxes inside the lift can vary in height and be subdivided
• Simple configuration and limited planning of product locations
• Automated refill
• High flexibility enables integration between multiple EffiMat®, conveyors and robots
• Designed and manufactured in Denmark, with attractive Scandinavian industrial design
• Fast return on investment (ROI)

TECHNICAL DATA

| WIDTH    | 2.690 mm |
| DEPTH    | 2.325 mm |
| HEIGHT   | Up to 16 metres |
| BOXES    | 400 x 600 mm at variable height, from 50 to 400 mm |
| CAPACITY | Up to 25 kg per box. The number of boxes is dependent on box size and lift height. It is possible to combine multiple towers. |

QUALITY IS EVERYTHING

EffiMat Storage Technology A/S was founded with the vision of creating the best order picking systems and vertical lift modules, in terms of speed, quality and flexibility.

We have successfully installed numerous solutions for international companies worldwide. We focus continually on product development, so our company is well-equipped to satisfy future requirements for high performance.

EFFISOFT™
EffiSoft™ is a finetuned option for EffiMat®. The software has a simple integration to all ERP systems and supports both simple and advanced logistics solutions. EffiSoft™ can manage both order picking systems and manual picking locations. EffiSoft™ allows you to achieve effective product flow management, increased efficiency and picking speed, due to order structure analysis (leading to lower error rates), as well as automated stock checking and inventory counting.

EFFICARE™
EffiCare™ gives you on-site service and maintenance by some of the industry’s most competent and experienced service technicians. This means that we are able to help you quickly and efficiently. You of course have access to remote access, at both software and at PLC level inside the system, which allows you to deploy proactive monitoring to solve problems before they result in downtime.
